

# Faya Admin Portal — Missing Modules and Full Back-Office Requirements

## 1. Major Problem With the Current Admin Concept

The admin portal is incomplete if it only shows:

- Countries
- Country rules
- Staff
- Roles
- Departments

That is only the **country and staff control layer**.

A real fintech admin portal must also show:

- Consumer users
- Merchant users
- POS users
- Admin users
- User profiles
- Merchant profiles
- KYC/KYB status
- Cards
- Wallets
- Transactions
- Devices
- Settlements
- Disputes
- Support tickets
- Terms and conditions
- App content
- Fees
- Limits
- Risk rules
- Audit logs
- Notifications
- System configuration

## 2. User Profile Management Is Missing

Admin must be able to see user profiles as soon as users create accounts.

## Consumer User List

Admin should see:

- User ID
- Firebase UID
- Full name
- Email
- Phone number
- Country of residence
- Nationality
- Date registered
- KYC status
- Account status
- Wallet status
- Card status
- Risk status
- Last login
- Device count

Filters:

- Country
- KYC status
- Account status
- Card status
- Registration date
- Risk level
- Wallet status

Search by:

- Name
- Email
- Phone
- User ID
- BVN/NIN where permission allows
- Card last 4
- Transaction reference

## Consumer Profile Detail Page

Admin should see:

- Personal details
- Contact details
- Address
- Country of residence
- Nationality
- KYC details
- Uploaded documents
- Liveness result

- Wallets
- Cards
- Linked devices
- Login history
- Transactions
- Support tickets
- Risk flags
- Notes
- Audit history

### **Admin Editing User Details**

Admin with permission should be able to edit:

- Name, only with reason and audit
- Phone number, only with verification process
- Email, only with verification process
- Address
- Date of birth, restricted
- Country of residence, restricted
- Nationality, restricted
- KYC correction fields
- Account status
- Risk notes
- Support notes

Admin should not freely edit sensitive details without:

- Permission
- Reason
- Audit log
- Approval for high-risk changes

Sensitive edits should require dual approval:

- BVN/NIN correction
- KYC status override
- Date of birth correction
- Name correction after verification
- Country change
- Cardholder information change
- Account unfreeze
- Settlement release
- Wallet balance adjustment

## **3. Merchant Profile Management Is Missing**

Admin should see every merchant as soon as they register.

## Merchant List

Fields:

- Merchant ID
- Business legal name
- Trading name
- Country
- Business type
- Owner name
- KYB status
- Settlement status
- Terminal count
- Phone POS count
- Transaction volume
- Risk level
- Date registered
- Account status

## Merchant Profile Detail Page

Admin should see:

- Business profile
- Owner/director details
- Beneficial owners
- Business documents
- KYB status
- Settlement account
- Branches
- Staff
- Terminals
- Phone POS devices
- Transactions
- Settlements
- Disputes
- Support tickets
- Risk flags
- Compliance notes
- Audit history

## Merchant Admin Actions

Permission-based actions:

- Approve KYB
- Reject KYB
- Request more documents
- Restrict merchant
- Suspend merchant
- Unblock merchant

- Hold settlement
- Release settlement, dual approval
- Change risk level
- Assign terminal
- Approve phone POS
- Block device
- Add internal note
- Update merchant category
- Update merchant limits

## 4. POS Staff and Device Profiles Are Missing

The admin portal must show all POS staff and devices.

### POS Staff List

Fields:

- Staff ID
- Merchant
- Branch
- Name
- Email
- Phone
- Role
- Status
- Device assigned
- Last login
- Transactions today

Actions:

- Suspend POS staff
- Reset POS PIN
- Force logout
- Remove device assignment
- View activity
- View transactions

### POS Device List

Fields:

- Device ID
- Merchant
- Branch
- Staff assigned
- Device type
- Phone POS or physical terminal
- Terminal serial
- Model

- OS version
- NFC status
- Device integrity
- Last sync
- Last transaction
- Status

Actions:

- Approve device
- Block device
- Remove device
- Reassign branch
- Reassign cashier
- View device logs
- View NFC/card failures
- Request replacement

## 5. Terms and Conditions Management Is Missing

You are correct: Terms should not be hardcoded inside the apps.

The admin portal needs a **Legal Content / Policy Manager**.

### Legal Content Types

Admin should manage:

- Consumer Terms and Conditions
- Merchant Terms and Conditions
- POS Terms of Use
- Privacy Policy
- Cardholder Agreement
- Virtual Card Terms
- Physical Card Terms
- NFC Payment Terms
- Merchant Acquiring Agreement
- Settlement Terms
- Refund Policy
- Chargeback Policy
- Cookie Policy for web
- Data Processing Agreement
- Country-specific legal notices

### Legal Content Fields

Each policy should have:

- Title
- Policy type
- Country

- App affected
- Version number
- Status
- Effective date
- Expiry date
- Content body
- Summary of changes
- Created by
- Approved by
- Published date

Policy statuses:

- Draft
- Pending approval
- Published
- Scheduled
- Archived

## **Policy Versioning**

Every update must create a new version.

Example:

- Consumer Terms v1.0
- Consumer Terms v1.1
- Consumer Terms v2.0

Admin should see:

- Current live version
- Draft version
- Previous versions
- Who approved it
- When users accepted it

## **User Acceptance Tracking**

The system must track:

- User ID
- Policy type
- Policy version
- Accepted date
- App used
- IP/device info
- Country
- Required or optional

If terms change materially, app should force user to accept new terms before using payment features.

## 6. App Content Management Is Missing

Text inside the apps should not all be hardcoded.

Admin should manage content for:

- Onboarding screens
- KYC instructions
- KYB instructions
- Country-specific document instructions
- Error messages
- FAQs
- Help articles
- Support categories
- App banners
- Maintenance notices
- Feature announcements
- Card education text
- NFC usage instructions
- POS setup instructions
- Merchant training content

### Content Manager Fields

- Content key
- Title
- Body
- App
- Country
- Language
- Version
- Status
- Created by
- Approved by
- Published date

Example content keys:

- consumer.onboarding.welcome
- consumer.kyc.nigeria.bvn\_help
- consumer.card.reveal\_warning
- merchant.terminal.request\_intro
- pos.tap\_card.instruction
- admin.login.security\_notice

## 7. App Configuration Is Missing

Admin should control app behaviour from backend.

## Remote App Settings

Admin should configure:

- Maintenance mode
- Force update version
- Minimum app version
- Feature flags
- Country availability
- Card issuing enabled/disabled
- NFC enabled/disabled
- Physical card enabled/disabled
- Merchant onboarding enabled/disabled
- POS onboarding enabled/disabled
- Phone POS enabled/disabled
- Support availability
- Registration open/closed per country

## Feature Flags

Examples:

- enable\_virtual\_cards\_ng
- enable\_physical\_cards\_ng
- enable\_faya\_nfc
- enable\_merchant\_onboarding
- enable\_phone\_pos
- enable\_terminal\_requests
- enable\_admin\_dual\_approval
- enable\_country\_ghana
- enable\_wallet\_reveal\_card

## 8. Card Management Is Missing

Since Faya issues virtual and physical cards, admin must see cards.

### Card List

Fields:

- Card ID
- User
- Country
- Card type
- Virtual or physical
- Scheme
- Last 4
- Status
- Created date
- Expiry
- Provider

- Currency

Card statuses:

- Pending
- Active
- Frozen
- Blocked
- Expired
- Terminated
- Replaced

## **Card Detail Page**

Admin should see:

- Card metadata
- User linked
- Provider card ID
- Last 4
- Scheme
- Currency
- Card controls
- Spend limits
- Freeze status
- Transaction history
- Tokenization status
- Wallet provisioning status
- Physical delivery status
- Card events

Admin must not see:

- Full PAN by default
- CVV
- PIN
- Raw card data

Sensitive card reveal should be extremely restricted or disabled for admin.

## **Card Actions**

Permission-based:

- Freeze card
- Unfreeze card
- Terminate card
- Replace card
- Reissue physical card
- Change limits
- View card events
- View tokenization status

- View wallet provisioning status

## 9. Wallet and Ledger Management Is Missing

Admin needs wallet visibility.

### Wallet List

Fields:

- Wallet ID
- User
- Country
- Currency
- Balance
- Available balance
- Held balance
- Status
- Created date

### Wallet Detail

Admin should see:

- Balance
- Ledger entries
- Holds
- Credits
- Debits
- Reversals
- Pending settlements
- Adjustment history
- Linked cards
- Linked transactions

### Wallet Actions

Highly restricted:

- Freeze wallet
- Unfreeze wallet
- Place hold
- Release hold
- Manual adjustment, dual approval
- Reverse transaction, dual approval
- Export ledger

## 10. Transaction Monitoring Is Missing

Admin should see all transactions across all products.

## Transaction List

Fields:

- Transaction ID
- User or merchant
- Country
- Amount
- Currency
- Type
- Status
- Payment method
- Card last 4
- Merchant
- Device
- Created date
- Risk status

Transaction types:

- Card payment
- NFC payment
- Wallet debit
- Wallet credit
- Refund
- Reversal
- Merchant payment
- Settlement
- Fee
- Chargeback
- Adjustment

## Transaction Detail

Admin should see:

- Full transaction metadata
- Customer
- Merchant
- Device
- Card metadata
- Provider reference
- Authorization code
- Response code
- Risk score
- Settlement status
- Dispute status
- Audit trail

Actions:

- View receipt

- Open dispute
- Add note
- Escalate to risk
- Escalate to finance
- Request reversal
- Request refund
- Hold settlement

## 11. KYC and KYB Queues Are Missing

You need proper review queues.

### KYC Queue

Fields:

- User
- Country
- Nationality
- Submitted date
- KYC level
- Document type
- Liveness status
- Screening status
- Risk score
- Assigned reviewer
- SLA timer

Actions:

- Approve
- Reject
- Request document
- Escalate
- Add note
- Assign reviewer

### KYB Queue

Fields:

- Merchant
- Country
- Business type
- Owner
- Documents submitted
- Risk category
- Screening status
- Assigned reviewer
- SLA timer

Actions:

- Approve
- Reject
- Request business document
- Request owner document
- Escalate
- Add note

## 12. Support Ticket Management Is Missing

Admin portal must have support tools.

### Support Ticket List

Fields:

- Ticket ID
- User/merchant
- Country
- Category
- Priority
- Status
- Assigned agent
- Created date
- SLA timer

Categories:

- Account access
- KYC
- KYB
- Card issue
- NFC issue
- POS issue
- Merchant settlement
- Terminal issue
- Transaction dispute
- Failed payment
- Suspicious activity

Actions:

- Reply
- Assign
- Escalate
- Close
- Reopen
- Add internal note
- Link transaction
- Link card

- Link device

## 13. Notification Management Is Missing

Admin should send and manage notifications.

### Notification Types

- Push notification
- Email
- SMS
- In-app message
- Security alert
- System announcement

### Notification Manager

Fields:

- Audience
- Country
- User type
- Title
- Body
- Channel
- Schedule
- Status
- Created by

Audiences:

- All consumers
- Consumers by country
- Merchants by country
- POS staff
- Admin staff
- KYC pending users
- Card users
- Suspended accounts
- High-risk accounts

## 14. Fees and Limits Management Is Missing

Fees and limits should be configurable by admin.

### Fee Manager

Admin should configure:

- Consumer card fee
- Virtual card fee

- Physical card fee
- Replacement card fee
- Merchant card acceptance fee
- POS fee
- Settlement fee
- Chargeback fee
- Refund fee
- Cross-border fee
- FX markup where applicable

Fee fields:

- Country
- Product
- Fee type
- Percentage
- Fixed amount
- Currency
- Effective date
- Status

## **Limit Manager**

Admin should configure:

- Wallet daily limit
- Card daily limit
- Card monthly limit
- ATM limit, if applicable
- POS spend limit
- Merchant transaction limit
- Device daily limit
- Cashier daily limit
- Settlement limit
- Refund limit

Limits should be controlled by:

- Country
- KYC tier
- User risk level
- Merchant risk level
- Card type
- Device type

## **15. Risk and Fraud Management Is Missing**

Admin should have risk tools.

## Risk Dashboard

Shows:

- High-risk users
- High-risk merchants
- Suspicious devices
- Velocity alerts
- Failed login spikes
- Repeated failed payments
- Chargeback spikes
- NFC failure patterns
- Card testing patterns
- Location mismatches

## Risk Actions

- Freeze user
- Restrict card
- Freeze wallet
- Hold merchant settlement
- Block device
- Add to watchlist
- Escalate to AML
- Require re-KYC
- Require document update

## 16. Audit Logs Are Missing

Every admin action must be logged.

Admin should see:

- Who did it
- What they changed
- Before value
- After value
- Time
- IP address
- Device/browser
- Reason
- Approval chain

Audit logs needed for:

- Profile edits
- KYC approvals
- KYB approvals
- Card freezes
- Wallet freezes
- Settlement holds

- Terms updates
- Fee changes
- Limit changes
- Staff permission changes
- Country config changes
- Document views
- Data exports

## 17. Data Export and Reports Are Missing

Admin should export reports by permission.

Reports:

- User report
- Merchant report
- KYC report
- KYB report
- Transaction report
- Settlement report
- Card report
- Wallet ledger report
- Device report
- POS transaction report
- Dispute report
- Support report
- Audit log report
- Regulatory report

Export formats:

- CSV
- Excel
- PDF

Sensitive exports require:

- Permission
- Reason
- Audit log
- Approval if large or sensitive

## 18. Admin Dashboard Analytics Are Missing

The Admin Portal needs global and country dashboards.

### Global Dashboard

Shows:

- Total users

- Total merchants
- Total active cards
- Total virtual cards
- Total physical cards
- Total wallets
- Total transactions
- Total volume
- Failed transactions
- Pending KYC
- Pending KYB
- Open support tickets
- Open disputes
- Settlement pending
- Risk alerts

### **Country Dashboard**

Shows the same, filtered by country.

## **19. Admin Approval Workflows Are Missing**

Some admin actions should not happen instantly.

Approval required for:

- Edit sensitive user profile
- Override KYC status
- Override KYB status
- Release settlement hold
- Change fees
- Change limits
- Publish new legal terms
- Export sensitive data
- Unfreeze high-risk user
- Unblock restricted merchant
- Adjust wallet balance
- Terminate card manually

Approval statuses:

- Requested
- Pending approval
- Approved
- Rejected
- Cancelled
- Completed

## **20. Admin Notes and Case Management Are Missing**

Every user, merchant, transaction, card, and device should support internal notes.

Note fields:

- Entity type
- Entity ID
- Note
- Department
- Visibility
- Created by
- Created date

Visibility:

- Internal only
- Compliance only
- Risk only
- Finance only
- Support visible

## **21. Document Management Is Missing**

Admin should see and manage uploaded documents.

Document types:

- User ID document
- Selfie/liveness
- Proof of address
- BVN/NIN verification result
- Business registration
- Tax certificate
- Merchant licence
- Beneficial owner document
- Settlement bank proof
- Dispute evidence

Actions:

- View document, permission-based
- Approve document
- Reject document
- Request replacement
- Mark expired
- Download, restricted
- Add note

## **22. System Health and Provider Monitoring Is Missing**

Admin should monitor providers.

Provider pages:

- Firebase status
- Card issuer processor status
- Paymentology status
- KYC provider status
- SMS provider status
- Email provider status
- Push notification status
- Bank/settlement provider status
- POS provider status

Shows:

- Uptime
- Failed requests
- Error rates
- Last successful sync
- API latency
- Webhook failures
- Retry queue

## 23. Webhook/Event Logs Are Missing

Admin must see events from external providers.

Webhook logs:

- Provider
- Event type
- Entity ID
- Payload status
- Received time
- Processing status
- Retry count
- Error message

Actions:

- Replay webhook
- Mark resolved
- View payload, masked
- Escalate to engineering

## 24. Admin Settings Missing

Admin settings should include:

- Platform name
- Supported countries
- Supported currencies

- Enabled products
- Maintenance mode
- Minimum app versions
- Contact emails
- Support SLA
- Terms version
- Privacy version
- Default fees
- Default limits
- Risk thresholds
- Card provider config
- KYC provider config
- Settlement provider config

## 25. Full Admin Portal Menu Required

The complete Admin Portal menu should be:

1. Dashboard
2. Countries
3. Users
4. Merchants
5. POS Staff
6. Devices
7. Cards
8. Wallets
9. Transactions
10. KYC
11. KYB
12. Settlements
13. Disputes
14. Support Tickets
15. Risk and Fraud
16. Documents
17. Terms and Policies
18. App Content
19. Notifications
20. Fees
21. Limits
22. Reports
23. Provider Logs
24. Webhook Logs
25. Admin Staff
26. Roles and Permissions
27. Approval Requests
28. Audit Logs
29. System Settings

## 26. The Correct Admin Rule

Admin should see everything **only if permission allows it.**

Super Admin:

- Can see everything
- Can configure everything
- Can create roles
- Can assign permissions
- Can publish content
- Can approve sensitive actions

Country Admin:

- Sees only assigned country
- Manages only assigned country

Compliance:

- Sees KYC/KYB and documents
- Cannot edit finance unless allowed

Finance:

- Sees settlements, fees, reconciliation
- Cannot approve KYC unless allowed

Support:

- Sees tickets and limited user/merchant data
- Cannot view full sensitive documents unless allowed

Risk:

- Sees risk alerts, transactions, devices
- Can freeze/restrict by permission

Engineering:

- Sees logs and system health
- Should not see full personal documents by default

## **27. Most Important Missing Features Summary**

The current admin list is missing:

- User profiles
- Merchant profiles
- POS staff profiles
- Card management
- Wallet management
- Transaction monitoring
- KYC queue
- KYB queue
- Terms and policy manager

- App content manager
- App remote configuration
- Fees manager
- Limits manager
- Notification manager
- Support ticketing
- Documents manager
- Risk and fraud dashboard
- Provider logs
- Webhook logs
- Audit logs
- Approval workflows
- Admin notes
- Reports and exports
- System settings
